

# Medication Administration Officers

At events where medications are required to be maintained and administered by event medical staff, units may provide their own medical administration officer, as follows:

Individual units attending Daniel Webster Council events are encouraged to provide one or more adult leaders to serve as medication administration officers, under the supervision of the event Camp Medical Officer

(CMO). Units are encouraged to provide 24/7 coverage. If no medication administration officer is present during med-call, all medications will be required to be administered by event medical staff, which may result in delays.

Medication administration officers will be either:

1. An MD, DO, APRN, PA, RN, LPN or EMT who holds either an active, unrestricted license to practice issued or recognized by the State of New Hampshire or a Camp Physician License, OR
2. A registered adult leader who has completed the American Academy of Pediatrics online course: Medicine Administration in Early Education and Child Care.

(<https://www.aap.org/Medication-Administration-in-Early-Care-and-Education-Settings-2024>).

Medication administration officers may be approved by the Council Medical Director

Medication administration officers become adjunct medical staff for the duration of their unit's participation in the event.

Medication administration officers will administer medication to their unit members in the manner prescribed on the Medication Administration Record (MAR)
